LANGUAGE SCHOOL

English summer course and Coding course in London, with Homestay

DESCRIPTION

Nacel English School London now provides international students with a unique opportunity to improve their English skills while learning computer programming and other technology skills. Our educational concept is to give students the opportunity to practise their language skills in real situations, gain confidence and believe in their knowledge and capacity to learn something new. Our educational programs should contribute to train a new generation of innovators and global leaders.

The English Programming course combines English language tuition in the morning with various Coding and Development courses in the afternoon. It gives students the basics of Coding and Programming and opens their mind to a complete new world of personal and educational development.

ENGLISH + CODING

International students attend a 15 hour English course in the morning. Afternoons are dedicated to Coding courses delivered by computer experts used to teach technologies to young learners. They have a passion for technologies and want to inspire the next generation.

Those experts are English native speakers but adapt their course to non

English native speakers. School teachers or group chaperones may also help translating instructions into the students' mother tongue if there is any difficulty.

The content of the course is chosen by the group; we offer options for:

- Game Programming with Java
- Python Coding
- iOS and Apple Watch App Development with Swift and Xcode
- Android Application Development with App Inventor
- Tech Entrepreneurship

The benefits of the course are not only to have students trained in Coding and in English ; it also helps them to develop their problem-solving skills, foster their creativity, as well as requires them to get organized and methodical. The course may therefore be integrated into a larger educational project by schools and parents. Students will be provided with computers and software required for the course.
